

# Prevent record insert in Apex

Did you know that:

**You can make validations in the Apex trigger code and prevent selected records inserted?**

```
for (SObject record : (List<SObject>) Trigger.new) {  
    if (!checkValidation(recrod)) {  
        throw new DmlException();  
    }  
}
```

Prevent saving only records that failed validation:

```
for (SObject record : (List<SObject>) Trigger.new) {  
    if (!checkValidation(record)) {  
        record.addError('Validation failed!');  
    }  
}
```
