

Do not check if List is empty

Did you know that:

DML operations on empty lists are NOT consuming the transaction DML limits?

```
List<Account> accountsToInsert = new List<Account>();  
if (!accountsToInsert.isEmpty()) {  
    insert accountsToInsert;  
}
```

```
List<Account> accountsToInsert = new List<Account>();  
insert accountsToInsert;
```
