

Deploy to Salesforce Production without Tests

- By default when deploying items to Production you would run local tests (all tests except for Unlocked/Managed Packages)
- You cannot use the NoTestRun flag as it will result in an error
 - *"testLevel of NoTestRun cannot be used in production organizations"*
- Use any of the below commands to deploy to Prod without running Unit Tests!
 - This will work only if you do not have Apex Classes/Triggers to be deployed

```
sfdx force:source:deploy [...] --testlevel RunSpecifiedTests --runtests "someRandomString"  
sf project deploy start [...] --test-level RunSpecifiedTests --tests "someRandomString"
```
